

Trail's End Introduces the First Microwave Popcorn with No Diacetyl Flavoring

New Popcorn Flavoring Features Same Great Buttery Taste

Trail's End Popcorn has become the first microwave popcorn to eliminate the flavoring ingredient Diacetyl from its microwave popcorn products.

Diacetyl is used in butter flavorings found in many other brands of microwave popcorn, as well as in many pastries, cake mixes, flour, cookies, crackers, frozen foods, potato chips, and candy.

Although Diacetyl has long been considered safe for use in consumer food products, the flavoring has been cited as a possible source of injury to certain employees of food companies who may have inhaled large dosages of Diacetyl while mixing it under unsafe conditions.

At Trail's End, our associates follow strict safety guidelines in the manufacturing of our products, so we have had no incidents related to Diacetyl exposure.

However, since consumers are increasingly concerned about this issue, we have removed it from our flavorings. It was a challenge to eliminate Diacetyl from our flavorings and still maintain the great buttery taste that consumers love, but we did it. Consumer research substantiates that our new flavoring features the same great buttery taste that Trail's End consumers love.

We're proud to take an industry-leading role in eliminating Diacetyl from our flavorings. Since popcorn is our only product, we strive to improve our understanding of the needs and wants of popcorn consumers and to be the best company in meeting those needs and wants. That, we believe, is the best way to thank you for buying Trail's End Popcorn...and encourage you to continue to support local Scouting.

The Trail's End Carmel Corn, Chocolatey Carmel Crunch, and Gourmet Cheese Corn products do NOT have any added Diacetyl flavoring.
